
SINGULANCE
INVESTOR PRESENTATION · 2026
Proactive intelligence, inside your own walls.
SINGULANCE
Building proactive intelligence for enterprises and their people.
HIVEMIND
HyperAgents
Runtime
TARA

Your firm knows more than it can act on.

Knowledge lives across documents, matters and inboxes.
Senior people search, rebuild and explain it again.
Client conversations start without memory.

The result: expensive expertise is spent on repeatable knowledge work.

A once-per-category window.

Three changes make this market buyable now.

01 · AI ADOPTION

Budgets for an AI workforce exist.

Enterprise buyers are actively creating AI-workforce budgets and looking for systems they can trust.

02 · REGULATORY PRESSURE

Control is now a buying criterion.

DORA, the EU AI Act, GDPR and professional secrecy require isolation, evidence and accountability.

03 · THE SOVEREIGNTY GAP

Generic platforms optimise for scale.

Regulated European firms need AI that runs inside their own controls, not around them.

Regulation is not the obstacle. It is the timing advantage.

Proactive AI has arrived—for consumers.

US platforms now ship agents that act without being asked. None run a company inside its own walls.

META · SEP 2026

Muse

Personal agent that messages you unprompted, books, shops and fills forms. US launch; consumer apps and WhatsApp.

OPENAI · SEP 2026

dots

Always-on agents inside ChatGPT, each on its own cloud computer, doing proactive research between tasks.

XAI · AUG 2026

Grok Bot

Always-on cloud agent with persistent runtime, as reported; xAI has not published full details.

SINGULANCE

Proactive intelligence for enterprises—inside your own walls.

- **Built for company operations.** A shared company brain, specialists and reviewed work—not one person's errands.
- **Your walls.** EU-based hosting, with dedicated or self-hosted deployment.
- **Your memory.** Open-source ICARUS format, every write signed.
- **Your rules.** Approvals, permissions and an audit trail you control.

Consumer agents: launched by US platforms, consumer-first, with data held on the provider's servers. Sources: Meta (8 Sep 2026), OpenAI DevDay (29 Sep 2026), press reports on Grok Bot (Aug 2026).

Software is becoming labour.

SINGULANCE builds proactive intelligence for enterprises: a shared company brain and a governed AI workforce that does the work—inside your own walls.

Your company, your walls, your rules.

One company brain. A governed workforce.

Four products, one operating system—all working from the same governed context.

HIVEMIND

The company brain

Connects documents, workspaces and meetings into one company memory.

HyperAgents

The company workforce

Persistent specialists with their own computer, memory and playbooks.

Runtime

Your AI Chief of Staff

Sees what needs attention, plans, delegates and reviews the result.

TARA

The company voice

Customer, sales and team conversations—with full company context.

A client request becomes reviewed work.

From context to follow-through—with your judgment where it counts.

1 A request arrives

A client asks for a revised proposal.

2 HIVEMIND brings context

Prior decisions, account history and firm records.

3 Runtime plans the work

Clear assignments, owners and dependencies.

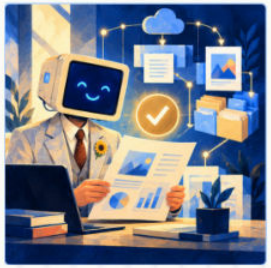

4 HyperAgents do the work

Research and a draft in their own workspaces.

5 You decide what matters

A call or text when the next step needs you.

6 The result is reviewed

Corrections, approved delivery, context retained.

Illustrative workflow. Calls and texts use configured channels and permissions; consequential actions require approval.

Land on memory. Expand into labour.

Give the company durable context first. Once the mind is trusted, add the work it can run.

01 · LAND

Company mind

HIVEMIND · memory + context

- Connect documents, workspaces and meetings.
- Fastest proof of value; lowest-risk first purchase.
- Starts the data gravity.

→

02 · EXPAND

Operating system

HyperAgents + Runtime · labour

- Research, marketing and outreach specialists.
- Priced by scope and usage.
- Every new module inherits the context.

→

03 · EXTEND

Customer voice

TARA · interaction

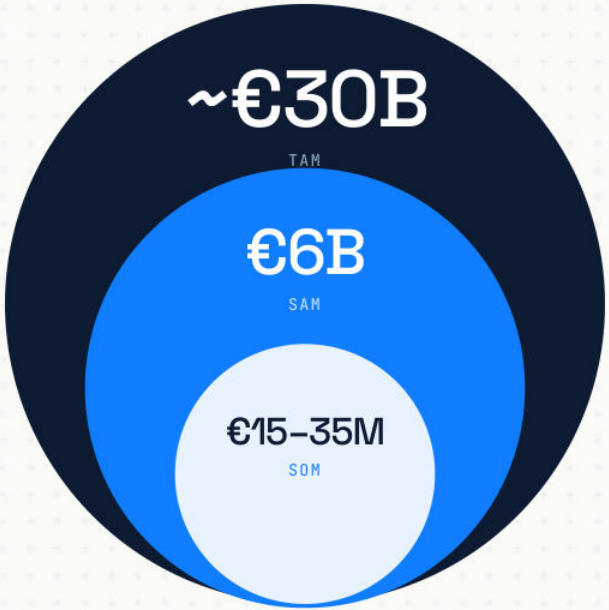

- Customer and sales conversations with memory.
- Priced by interaction and service level.
- Closes the loop back into the brain.

Each step raises account value and switching cost.

Revenue expands inside the account without a new sale for a new tool.

Horizontal category. Focused first market.

A big category, and a credible slice we can reach.

TAM

Enterprise AI operating category

Bounded by four reported markets: enterprise AI, AI agents, conversational/voice AI and knowledge management.

SAM

Regulated knowledge firms, EU27 + CH + UK

~100K mid and large firms × ~€60K blended ACV = €6B.

SOM

DACH law + internal audit, 3-year obtainable

300–500 tenants of a ~15–20K reachable base × €50K–€70K = €15M–€35M.

Draft bottom-up model; segment counts, ACV and the TAM source require external validation.

Built first for firms where trust is expensive.

Win the hardest niche. Then roll.

01 · BEACHHEAD

DACH law firms

Knowledge-dense, confidentiality-bound, and paying senior rates for repeatable work.

02 · NEXT

Internal audit

Evidence-heavy work under DORA and growing regulatory scrutiny.

03 · ADJACENT

Regulated adjacencies

Advisory, compliance and financial-services teams with the same needs.

04 · PLATFORM

Every company

Any company that wants to run with its own memory and workforce.

Lighthouse → reference → lookalikes → adjacent verticals.

Win references where trust is hardest; every adjacent vertical then buys on proof.

B2B makes the revenue. B2C creates the pull.

One platform, two routes to adoption, with partners for access.

B2B enterprise · revenue engine

Founder-led sales into regulated firms.

Paid activation → platform subscription → expansion into workforce and voice. This is the core business.

B2C / Pro · distribution engine

Individual use creates product pull.

Self-serve plans—Free, Plus €24, Pro €79, Max €199, Team €249, Agency €449—let professionals and agencies adopt the brain and pull in their teams.

Partners · access

Introductions in priority markets.

GTM partners CNJE and B&B, and 200+ European relationships open doors in DACH, the UK and Slovakia.

DISCOVERY → EVALUATION → PROPOSAL → DECISION → CONTRACTING

We sell a company outcome, not a feature list. A partner introduction is access—not a deal—until direct buyer progress exists.

Paid proof. Recurring revenue. Expansion.

Every revenue line is a subscription, so growth inside an account compounds.

01 · PROOF

Activation

€6K–€12K

CREDITED TO YEAR ONE

Pilot fee converts into the annual contract, so proof pushes toward recurring revenue.

02 · PLATFORM

Annual platform

€4.5K–€18K+

PER MONTH · BY ORG SIZE

Growth €4.5K, Business €9K, Enterprise from €18K. 12-month minimum, 5–7% renewal uplift.

03 · EXPANSION

AI employees

€290–€990

PER SPECIALIST / MONTH

The main expansion unit: buyers add specialists the way they add hires.

04 · EXPANSION

TARA voice

Voice line

+ ~€0.20 / MINUTE

Included minutes per month, then metered. Market rate is $0.10–0.25 per minute.

Self-serve ladder for distribution.

Free · Plus €24 · Pro €79 · Max €199 per person · Team €249 (5 people) · Agency €449 (3 client workspaces, +€99 per client).

Recommended 2026 pricing; self-serve annual billing 20% off. Validate against actual model, compute and support costs (target ≥75% gross margin).

The first €100K MRR is 18 firms.

A focused account count, with expansion built into every contract.

GROWTH

15 × €4.5K

= €67.5K

Firms up to 50 users.

BUSINESS

3 × €9K

= €27K

Firms up to 200 users.

AI EMPLOYEES

18 × €490

= €8.8K

One added specialist per account.

TOTAL

€103K

Modelled MRR

Before self-serve revenue.

Unit economics target: ≤€500 direct cost per account, ~89% contribution on Growth.

Falling inference costs widen the margin; specialists with their own computer must be costed separately.

Operating model, not a forecast. Prices are recommended 2026 bands; costs are planning targets to validate against actual hosting, model and support costs.

The longer it runs, the harder it is to replace.

Defensibility comes from what accumulates in the account—not from model access.

- **Data gravity**
  Memory compounds across documents, decisions and conversations. Switching cost rises every month.
- **Workflow ownership**
  Work runs through the platform, which becomes the system of record for company context and decisions.
- **Governed by design**
  Approvals, reviewed evidence and tenant isolation are what regulated buyers require —and generic platforms skip.
- **Specialists that learn**
  Corrections become revised playbooks. Each account's workforce gets better at that company's work.
- **Security as product**
  Post-quantum signed memory, hybrid PQ transport and a tamper-evident audit chain —hard to retrofit.
- **Open research engine**
  ICARUS (Apache-2.0) builds developer trust and distribution; value rides model progress instead of being erased by it.

Research you can inspect.

ICARUS v2: open-source memory engine behind HIVEMIND (Apache-2.0).

7.5×

Smaller storage

~600 B per memory vs ~4,500 B for Qdrant with int8.

32×

Vector compression

Product quantization with exact rescoring; 100% recall@10 overlap.

99.8%

Production agreement

Top-10 overlap with the previous stack on 8,682 live vectors.

1.33 ms

Recall@10 at 1M vectors

Native engine, ~1.5× faster than Qdrant over REST (2.06 ms).

PUBLISHED TRACKS

ICARUS memory · LongMemEval benchmark · Post-quantum cryptography · Cognitive Swarm Intelligence · Runtime design note

Company-reported (ICARUS v2, 3 Jul 2026). Latency is the native engine; through the Node binding used in production it is not yet faster than in-container Qdrant (4.0 vs 1.5 ms p50). 1M set expanded from real 10k data; hardware not stated; long-soak testing pending. singulancelabs.com/research ↗ · github.com/amar3012005/ICARUS ↗

Others give answers. We give capacity.

Most AI tools assist a person. SINGULANCE runs governed work for the company.

	GENERAL ASSISTANTS	ENTERPRISE SEARCH	AGENT BUILDERS	CONSUMER AGENTS	SINGULANCE
Company memory across tools	◐	●	○	○	●
Persistent specialists that do the work	○	○	◐	◐	●
Proactive—acts on signals without a prompt	○	○	◐	●	●
Approvals and reviewed evidence	○	○	◐	◐	●
Customer voice on the same context	○	○	◐	○	●
Built for regulated European buyers	◐	◐	○	○	●
Runs inside the company's own walls	◐	◐	◐	○	●

● built in ◐ partial or add-on ○ not the focus. Company assessment of category defaults; consumer agents = Meta Muse, OpenAI dots, xAI Grok Bot.

The product is built. Now we prove the motion.

Built, deployed and moving into the market.

4

Products live

HIVEMIND self-serve with public pricing; Runtime, HyperAgents and TARA in early access.

87.2%

LongMemEval accuracy

vs 68.9% naive vector RAG and 41.3% keyword search.

30K+

Signed memory writes

Live ML-DSA-65 signatures on managed hosting at ICARUS v2 publication.

200+

European relationships

Partners CNJE and B&B; live prospects in DACH, UK, Slovakia.

Builders of the product and the research.

A founding team that ships product and publishes the science behind it.

Amar Sai Gadde

Founder & CEO

Leads product, research and founder-led sales. Architect of HIVEMIND, Runtime, HyperAgents and the open-source ICARUS memory engine.

Ceyda Sarioglu

Co-founder

Co-founder of SINGULANCE.

L3S Research Center

Research collaboration (Leibniz)

Three papers on long-horizon memory, retrieval and governance. ICARUS released open source.

Open research, inspectable claims.

ICARUS research v1 (24 Jun 2026), v2 (3 Jul 2026) and CLI v0.3.98 (19 Oct 2026) are published with methods and recorded runs.

Capital builds the repeatable AI company machine.

The raise turns a product system into a customer system: lighthouse deployments, enterprise delivery, distribution and a measured sales engine.

01 · CUSTOMERS

Paid lighthouse deployments

Convert access into paid activations and production references in DACH law and audit.

02 · PRODUCT

Operating-system delivery and security

Harden delivery, security and data-residency options for regulated buyers.

03 · GO-TO-MARKET

Founder sales + partner enablement

A repeatable sales system, partner playbooks and the first sales hires.

Milestone the round funds: lighthouse references and a path to the €100K MRR operating model.
