TARA

# Your firm knows more than it can act on.

Knowledge lives across documents, matters and inboxes.
Senior people search, rebuild and explain it again.
Client conversations start without memory.

The result: expensive expertise is spent on repeatable knowledge work.

# Firms don’t need another AI experiment.

They need more trusted capacity.

Fragmented knowledge

## Context is rebuilt, not reused.

Decisions, precedents and client history sit across documents, matters, inboxes and individual people.

Isolated work

## Every handoff loses context.

Teams repeat work across tools. Follow-through depends on whoever remembers what happens next.

Uncontrolled AI

## Speed without accountability.

General-purpose AI raises new questions about confidentiality, control and who checked the result.

### What it costs your firm.

Senior time on repeatable work, slower client response, and commitments that depend on someone’s memory.

# A once-per-category window.

Three changes make this market buyable now.

01 · AI ADOPTION

## Budgets for an AI workforce exist.

Enterprise buyers are actively creating AI-workforce budgets and looking for systems they can trust.

02 · REGULATORY PRESSURE

## Control is now a buying criterion.

DORA, the EU AI Act, GDPR and professional secrecy require isolation, evidence and accountability.

03 · THE SOVEREIGNTY GAP

## Generic platforms optimise for scale.

Regulated European firms need AI that runs inside their own controls, not around them.

Regulation is not the obstacle. It is the timing advantage.

# Proactive AI has arrived—for consumers.

US platforms now ship agents that act without being asked. None run a company inside its own walls.

META · SEP 2026

## Muse

Personal agent that messages you unprompted, books, shops and fills forms. US launch; consumer apps and WhatsApp.

OPENAI · SEP 2026

## dots

Always-on agents inside ChatGPT, each on its own cloud computer, doing proactive research between tasks.

XAI · AUG 2026

## Grok Bot

Always-on cloud agent with persistent runtime, as reported; xAI has not published full details.

SINGULANCE

### Proactive intelligence for enterprises—inside your own walls.

- **Built for company operations.** A shared company brain, specialists and reviewed work—not one person's errands.
- **Your walls.** EU-based hosting, with dedicated or self-hosted deployment.
- **Your memory.** Open-source ICARUS format, every write signed.
- **Your rules.** Approvals, permissions and an audit trail you control.

Consumer agents: launched by US platforms, consumer-first, with data held on the provider's servers. Sources: Meta (8 Sep 2026), OpenAI DevDay (29 Sep 2026), press reports on Grok Bot (Aug 2026).

# Software is becoming labour.

SINGULANCE builds proactive intelligence for enterprises: a shared company brain and a governed AI workforce that does the work—inside your own walls.

Your company, your walls, your rules.

# One company brain. A governed workforce.

Four products, one operating system—all working from the same governed context.

## HIVEMIND

The company brain

Connects documents, workspaces and meetings into one company memory.

## HyperAgents

The company workforce

Persistent specialists with their own computer, memory and playbooks.

## Runtime

Your AI Chief of Staff

Sees what needs attention, plans, delegates and reviews the result.

## TARA

The company voice

Customer, sales and team conversations—with full company context.

# A client request becomes reviewed work.

From context to follow-through—with your judgment where it counts.

### 1 A request arrives

A client asks for a revised proposal.

### 2 HIVEMIND brings context

Prior decisions, account history and firm records.

### 3 Runtime plans the work

Clear assignments, owners and dependencies.

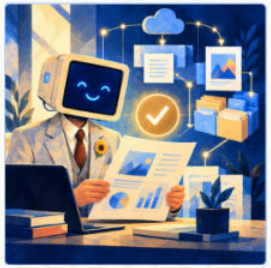

### 4 HyperAgents do the work

Research and a draft in their own workspaces.

### 5 You decide what matters

A call or text when the next step needs you.

### 6 The result is reviewed

Corrections, approved delivery, context retained.

Illustrative workflow. Calls and texts use configured channels and permissions; consequential actions require approval.

# The company brain becomes a workforce.

Each module acts from the same context—so work compounds instead of restarting.

INTELLIGENCE

## Research, knowledge and decisions

Answers from the firm's own record. Conflicts and missing context surface before they cost time.

MARKETING

## Positioning, content and campaigns

Drafted from what the firm actually knows and has delivered —not generic copy.

OUTREACH

## Prospects, qualification and follow-up

HyperAgents find prospects, qualify leads and follow up— with approval before anything is sent.

CUSTOMER

## Voice and support with TARA

Conversations that start with memory and end inside the company workflow.

**Start with one workflow. Add the next when the first is proven.**

Every new module inherits the context the earlier ones built.

# Built for firms that cannot lose control.

Autonomy where it helps. Your approval where it matters.

- **Approval gates**
  Consequential actions wait for a person. Runtime reviews evidence and requests corrections before delivery.
- **Permission-scoped access**
  OAuth2 for every connected service, role-based access, and agents limited to authorised goals and permissions.
- **EU-based hosting**
  Primary application and database infrastructure hosted in the EU. Dedicated or self-hosted deployment on contract.
- **Signed company memory**
  Every memory write signed with ML-DSA-65 (FIPS 204), so forged or altered memories are detectable.
- **Post-quantum transport**
  Hybrid X25519 + ML-KEM-768 (FIPS 203) against harvest-now, decrypt-later attacks.
- **Tamper-evident audit**
  Hash-chained SLH-DSA (FIPS 205) audit trail. Connector tokens encrypted with AES-256-GCM.

Requests are scoped to the user and organisation; dedicated deployment is a separate, stronger control. Inference runs through configured model providers.
No certification is claimed. Details: singulancelabs.com/security ↗

# The longer it runs, the more it's worth.

Value accumulates in your account—not in a prompt.

## Memory

### Context that grows

Every document, decision and conversation adds context. The company brain becomes more useful every month.

## Learning

### Specialists that improve

HyperAgents revise their playbooks when they find better methods, and carry lessons to the next assignment.

## Speed

### Faster to the next outcome

The time from a recognised need to a running service shrinks as context and playbooks build up.

**Memory, governed work and interaction history compound in one account.**

That is what makes the platform hard to replace—and more valuable the longer you use it.

# Built, deployed and moving into the market.

Not a concept deck. Published numbers, with the method beside the claim.

**4**

### Products live

HIVEMIND self-serve today; Runtime, HyperAgents and TARA in early access.

**87.2%**

### LongMemEval accuracy

Full-set average, against 68.9% for naive vector RAG and 41.3% for keyword search.

**<50 ms**

### Recall latency

p50 at production scale, measured continuously, against ~200 ms for naive vector RAG.

**40+**

### Connectors

Gmail, Slack, Drive, HubSpot and more. TARA speaks 30+ languages.

Company-reported. Benchmark published 26 June 2026 with public question set and harness: singulancelabs.com/benchmark ↗

# Built first for firms where trust is expensive.

Win the hardest niche. Then roll.

01 · BEACHHEAD

## DACH law firms

Knowledge-dense, confidentiality-bound, and paying senior rates for repeatable work.

02 · NEXT

## Internal audit

Evidence-heavy work under DORA and growing regulatory scrutiny.

03 · ADJACENT

## Regulated adjacencies

Advisory, compliance and financial-services teams with the same needs.

04 · PLATFORM

## Every company

Any company that wants to run with its own memory and workforce.

**Lighthouse → reference → lookalikes → adjacent verticals.**

Lighthouse customers get founder-led deployment and shape the specialist playbooks for their vertical.

# Start with paid proof. Scale on a platform.

Prove one outcome, then grow capacity on an annual platform.

01 · PROOF

## AI Company Activation

**€6K–€12K**

6-8 WEEKS · CREDITED

One workflow live in your environment. Fully credited against year one when you sign annually.

02 · PLATFORM

## Growth · Business

**€4.5K · €9K**

PER MONTH · ≤50 · ≤200 USERS

Company brain, Runtime, included specialist runs and a voice pool.

03 · INSIDE YOUR WALLS

## Enterprise

**from €18K**

PER MONTH · DEDICATED

Dedicated or self-hosted deployment, organisation-wide identity, audit and SLAs.

04 · EXPAND

## AI employees · voice

**€290–€990**

PER SPECIALIST / MONTH

Add specialists by role. TARA voice line with included minutes, then ~€0.20/min.

### Smaller teams start self-serve.

Plus €24 · Pro €79 · Max €199 per person per month · Team €249/month for 5 people, then €29 each · Agency €449/month incl. 3 client workspaces.

Indicative 2026 pricing, excl. VAT. Annual contracts with a 12-month minimum; annual self-serve billing saves 20%.

# What a paid activation proves.

One workflow, carried through—with evidence you can show your partners.

Scope

## Choose the outcome.

Pick one workflow where trusted capacity matters, and agree how success is measured before work starts.

Deploy

## Connect the context.

Connect documents and workspaces. HIVEMIND builds the company context; specialists are configured for the role.

Prove

## Show the result.

Reviewed deliverables in your environment, with corrections and human decisions on the record.

### Success is work carried through—with evidence.

We report completion, corrections, human interventions and time to a reviewed result.

# From first conversation to production.

We sell a company outcome, not a feature list.

01

## Discovery

We find the workflow where trusted capacity matters most.

02

## Evaluation

A defined evaluation, with your success measures and security review.

03

## Proposal

Scope, deployment and commercial terms, reviewed with your team.

04

## Decision

A clear decision path with the stakeholders who own the outcome.

05

## Production

Contract signed; the platform goes live and expands with you.

### Founder-led from day one.

You work directly with the people who build the product—Amar Sai Gadde, Founder & CEO, and Ceyda Sarioglu, Co-founder.
