TARA

Your company knows more than it can act on.

Decisions live in meetings.
Context lives across tools.
People hold it together—
and chase what happens next.

Software is becoming labour.

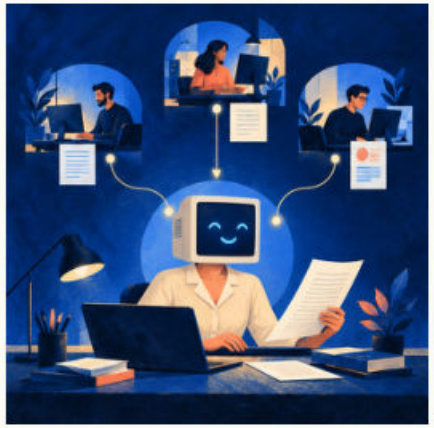

Runtime is our proactive AI Chief of Staff: company understanding turned into work.

Shared context. Persistent specialists. Reviewed results.

Your company, working as one.

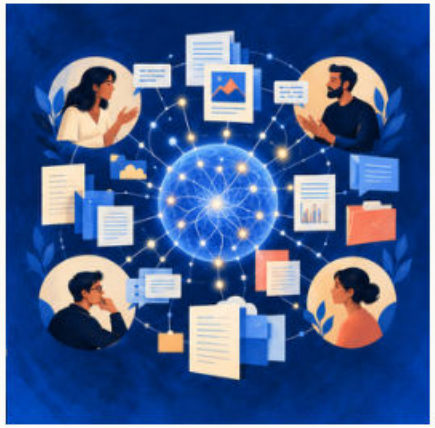

Company understanding becomes coordinated action.

Runtime

Your proactive AI Chief of Staff

Anticipates, leads and does the work.

HIVEMIND

Your proactive company Brain

Connects knowledge with what matters.

HyperAgents

Persistent, self-learning specialists

Execute, remember and adapt playbooks.

ICARUS

Research and open-source foundation

Advances memory and agent execution.

TARA

The voice of SINGULANCE

Customers, sales and conversations with agents.

RUNTIME

Your proactive, anticipatory AI Chief of Staff

- **Sees what needs attention**
  Connects company signals, goals and memory—before you ask.
- **Reasons about the next step**
  Finds gaps, weighs priorities and builds a plan.
- **Does the work and leads specialists**
  Works on its own computer and coordinates HyperAgents.
- **Checks the actual result**
  Reviews evidence, requests corrections and keeps blockers visible.
- **Carries the work forward**
  Retains context, rests and resumes without repeated prompting.

Calls or texts with useful updates—and asks when your judgment or permission is needed.

HIVEMIND

Your proactive company Brain

Connect what your people know to what your company does.

Documents

PDFs, docs, invoices and company records.

Connected workspaces

Slack, Gmail, Google Drive and HubSpot.

Meeting knowledge

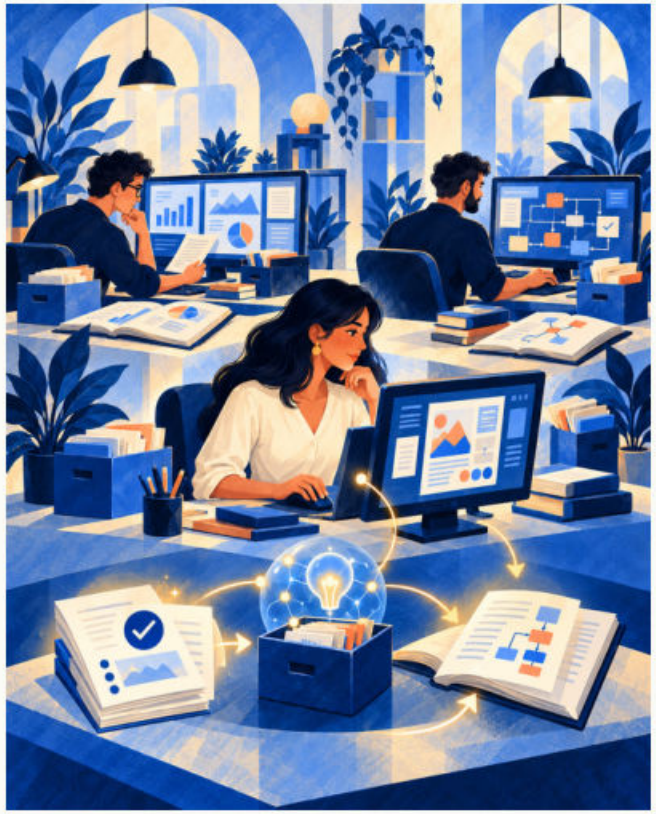

Decisions, commitments and the reasons behind them.

Company awareness, without another prompt.

Relates new signals to existing knowledge, surfaces conflicts and missing context, and brings relevant information back into the conversation.

HYPERAGENTS

Persistent, self-learning company specialists

Specialist work.
Experience that stays.

Research Operations Creative

Their own working environment

A computer, tools and persistent workspace for the role.

Their own memory

Useful context and lessons carried between assignments.

Playbooks that can adapt

Specialists revise how they work when they discover useful methods.

Runtime coordinates assignments and reviews their deliverables.

ICARUS

The research and open-source foundation

ICARUS Memory Filesystem

Default local memory

Durable .amr context with semantic, lexical, temporal and graph recall.

github.com/amar3012005/ICARUS

ICARUS Harness

Explicit opt-in

Repository-bound task governance, review and execution contracts.

github.com/amar3012005/ICARUS/tree/main/crate/icarus-harness

Agent Bus

Private · experimental

Agent communication and task handoffs; proposed bridge is not shipped.

github.com/amar3012005/SINGULANCE-agent-bus

Computer Use

Separate · experimental

Computer-action evaluation module, with its own setup and dependencies.

github.com/amar3012005/HIVEMIND-Computer-use

Research v1: 24 Jun 2026 · Research v2: 3 Jul 2026 · CLI v0.3.98: 19 Oct 2026

A commitment becomes completed work.

A customer proposal, carried from context to follow-through.

1 A commitment is made

A customer asks for a revised proposal.

2 HIVEMIND brings context

Earlier decisions, account history and company records.

3 Runtime chooses the next step

A plan, clear assignments and dependencies.

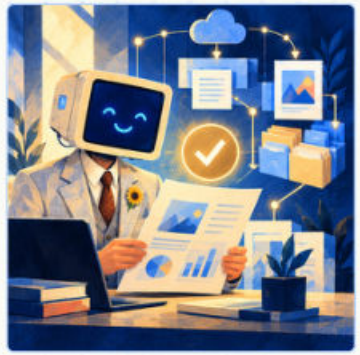

4 HyperAgents do specialist work

Research and a proposal draft in their own workspaces.

5 Runtime calls or texts you

A focused question when the next step needs your judgment.

6 The result is reviewed

Corrections, approved delivery and useful context retained.

Illustrative customer workflow. Calls and texts use configured channels and permissions; consequential actions require approval.

Proactive intelligence starts with attention.

Company signals become a reason to act—not another prompt to write.

Real-world context

Meetings, customer commitments and changing company priorities.

Injected documents

New records, updates, decisions and evidence inside HIVEMIND.

Slack Gmail Drive HubSpot

Workspace triggers

Incoming messages, app events and project changes.

HIVEMIND attention layer

Find the signal that matters.

Connect company knowledge with relevance, urgency and unresolved gaps.

A priority worth acting on

RUNTIME

Turn attention into progress.

Find the gap

Build the plan

Work + delegate

Review + continue

Comes back with progress.
Calls or texts when you are needed.

Results and new context inform the next decision.

Within authorized goals, connected services and permissions. Human judgment is brought in when needed—not required at every step.

TARA

The voice of SINGULANCE

A voice for your customers.
A voice for your team.

Customer interactions

Handle conversations, gather context and carry requests into the company workflow.

Sales conversations

Support discovery, qualification and follow-up with the context your company provides.

Talk to your agents

Speak to your AI team, give direction and discuss the work in progress.

Voice, connected to company understanding.

Research you can inspect.

Published ICARUS results, with the method beside the claim.

1.33 ms

Recall latency at 1M vectors

HNSW p50, top-10 retrieval. Scale corpus expanded from a real 10k base through deterministic perturbation.

1.00

Recall@5 versus exact

Quality measured separately on a real 10k embedding corpus, against float32 ground truth.

32×

Vector compression

Product quantization with ADC and exact rescoring. This describes vectors, not total system storage.

Company-reported research results; not independently rerun for this deck. Research metrics are separate from customer outcomes and end-to-end Runtime reliability.

Benchmark methodology ↗ Recorded runs ↗ Research article ↗

Sources reviewed 20 October 2026.

Make proactive work dependable.

The next product milestones: continuity, learning and repeatable customer value.

Continuity

Carry the next step through.

Demonstrate linked signal, execution, review and continuation receipts across rest and recovery.

Specialist learning

Show the lesson being reused.

Trace a correction into a revised playbook, then measure its effect on a later assignment.

Customer workflows

Make useful work repeatable.

Validate complete workflows with pilot teams: source context, reviewed deliverables and human decisions.

Success is work carried through—with evidence.

Track completion, corrections, human interventions and time to a reviewed result.

Proposed validation milestones; no delivery dates committed.
